Read the given passage and answer the questions that follow:

Basicity of amines is related to their structure. Basic character of an amine depends upon the ease of formation of the cation by accepting a proton from the acid. The more stable the cation is relative to the amine, more basic is the amine.

13. Which of the following compounds has higher pK_b ; Methylamine or Aniline?

Assertion and Reason Type

14. Assertion: Direct nitration of aniline yields significant amount of meta derivative besides the ortho and para derivatives.

Reason: In the strongly acidic medium, aniline is protonated to form the anilinium ion.

- a) Both assertion and reason are correct statements, and reason is the correct explanation of the assertion.
- b) Both assertion and reason are correct statements, but reason is not the correct explanation of the assertion.
- c) Assertion is correct, but reason is wrong statement.
- d) Assertion is wrong, but reason is correct statement.
- **15.** Assertion: Butan-1-amine is more soluble in water than Butan-1-ol.

Reason: Alcohols are more polar than amines and form stronger intermolecular hydrogen bonds than amines.

- a) Both assertion and reason are correct statements, and reason is the correct explanation of the assertion.
- b) Both assertion and reason are correct statements, but reason is not the correct explanation of the assertion.
- c) Assertion is correct, but reason is wrong statement.
- d) Assertion is wrong, but reason is correct statement.
- **16.** Assertion: In aqueous phase, secondary amines are more basic than primary amines. Reason: Alkyl group is electron donating.
 - a) Both assertion and reason are correct statements, and reason is the correct explanation of the assertion.
 - b) Both assertion and reason are correct statements, but reason is not the correct explanation of the assertion.
 - c) Assertion is correct, but reason is wrong statement.
 - d) Assertion is wrong, but reason is correct statement.
