

INDIAN SCHOOL AL WADI AL KABIR

CLASS: VII	DEPARTMENT: SCIENCE 2021 - 2022	DATE: 29/04/2021
TEXTBOOK Q & A	TOPIC: HEAT	NOTE: A4 FILE FORMAT
NAME OF THE STUDENT:	CLASS & SEC:	ROLL NO.

1. State similarities and differences between the laboratory thermometer and the clinical thermometer.

SIMILARITIES

- i) Both thermometers consist of long narrow uniform glass tubes.
- ii) Both have a bulb at one end with mercury.
- iii) Both use Celsius scale on the glass tube.

DIFFERENCES

LABORATORY THERMOMETER	CLINICAL THERMOMETER
i) The range of a laboratory thermometer is generally from -10°C to 110°C	i) The range of a clinical thermometer is from 35°C to 42°C
ii) Kink is absent	ii) Kink is present
iii) It is used for measuring the temperature of other objects	iii) It is used only for measuring human body temperature

2. Give two examples each of conductors and insulators of heat.

Ans: Conductors of heat : (i) Aluminium (ii) Iron

Insulators of heat: (i) Wood (ii) Plastic

3. Fill in the blanks:

- (a) The hotness of an object is determined by its temperature.
- (b) Temperature of boiling water cannot be measured by a clinical thermometer.
- (c) Temperature is measured in degree celsius

- (d) No medium is required for transfer of heat by the process of radiation.
- (e) A cold steel spoon is dipped in a cup of hot milk. It transfers heat to its other end by the process of conduction
- (f) Clothes of dark colours absorb heat better than clothes of light colours.

4. Match the following:

- | | |
|---|-------------------|
| (i) Land breeze blows during | (d) |
| <u>night</u> (ii) Sea breeze blows during | (c) |
| <u>day</u> (iii) Dark coloured clothes are preferred during | (b) |
| <u>winter</u> | |
| (iv) Light coloured clothes are preferred during | (a) <u>summer</u> |

5. Discuss why wearing more layers of clothing during winters keeps us warmer than wearing just one thick piece of clothing.

Ans: More layers of clothing keep us warm in winters as they have a lot of space between them. This space gets filled up with air. As air is a bad conductor, it does not allow the body heat to escape out.

6. Look at the Figure. Mark where the heat is being transferred by conduction, by convection and by radiation.

Fig. 4.13

Ans: (a) Transfer of heat from hot plate to pan is by conduction.

(b) Transfer of heat within water is by convection.

(c) Transfer of heat from hot bodies like pan, hot plate and burner to the surroundings is by radiation.

7. In places of hot climate, it is advised that the outer walls of houses be painted white. Explain.

Ans: In places of hot climate, it is advised to paint the outer walls of houses as white because a light colour such as white reflects back most of the heat that falls on it. Hence, a light colour tends to keep the house cool.

8. One litre of water at 30°C is mixed with one litre of water at 50°C. The temperature of the mixture will be

(a) 80°C

(b) more than 50°C but less 80°C

(c) 20°C

(d) between 30°C and 50°C

Ans: (d) between 30°C and 50°C.

9. An iron ball at 40°C is dropped in a mug containing water at 40°C.

The heat will

(a) flow from iron ball to water.

(b) not flow from iron ball to water or from water to iron ball.

(c) flow from water to iron ball

(d) increase the temperature of both.

Ans: (b) not flow from iron ball to water or from water to iron ball as both the substances have same temperature.

10. A wooden spoon is dipped in a cup of ice cream. Its other end

(a) becomes cold by the process of conduction.

(b) becomes cold by the process of convection.

(c) becomes cold by the process of radiation.

(d) does not become cold.

Ans: (d) does not become cold .

11. Stainless steel pans are usually provided with copper bottoms. The reason for this could be that

(a) copper bottom makes the pan more durable.

(b) such pans appear colourful.

(c) copper is a better conductor of heat than the stainless steel.

(d) copper is easier to clean than the stainless steel.

(c) copper is a better conductor of heat than the stainless steel.
