	INDIAN SCHOOL AL WADI AL KABIR	
Class: XII	**Department: SCIENCE 2021 - 22** **SUBJECT: PHYSICS**	**Date of submission:** **16/05/2021**
Worksheet No: 01 **WITH ANSWERS.**	**CHAPTER:** **ELECTRIC CHARGES AND FIELDS**	**Note:** **A4 FILE FORMAT**
Name of the student:	**Class & Sec:**	**Roll No:**

OBJECTIVE BASED QUESTIONS

1.At a particular point, electric field depends upon

(a) source charge Q only (b)test charge q_0 only (c) both Q and q_0 (d) neither Q nor q_0

2. In Fig.1.1, two positive charges q_2 and q_3 fixed along the y axis, exert a net electric force in the + x direction on a charge q_1 fixed along the x axis. If a positive charge Q is added at (x, 0), the force on q_1.

(a) shall increase along the positive x-axis.

(b) shall decrease along the positive x-axis.

(c) shall point along the negative x-axis.

(d) shall increase but the direction changes because of the intersection of Q with q_2 and q_3.

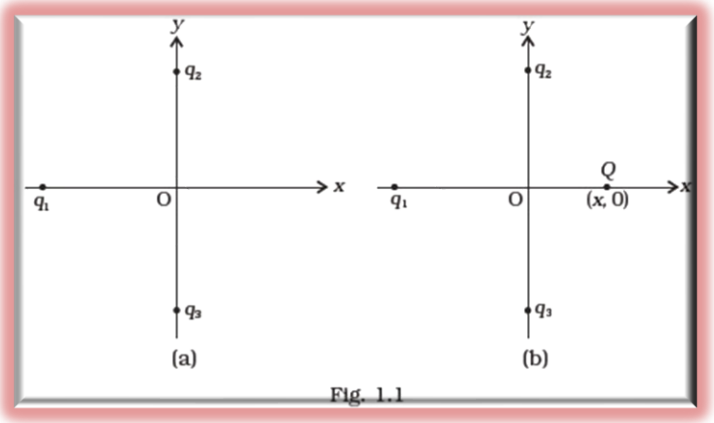

Fig. 1.1

3. A point positive charge is brought near an isolated conducting sphere (Fig. 1.2). The electric field is best given by

(a) Fig (i)

(b) Fig (ii)

(c) Fig (iii)

(d) Fig (iv)

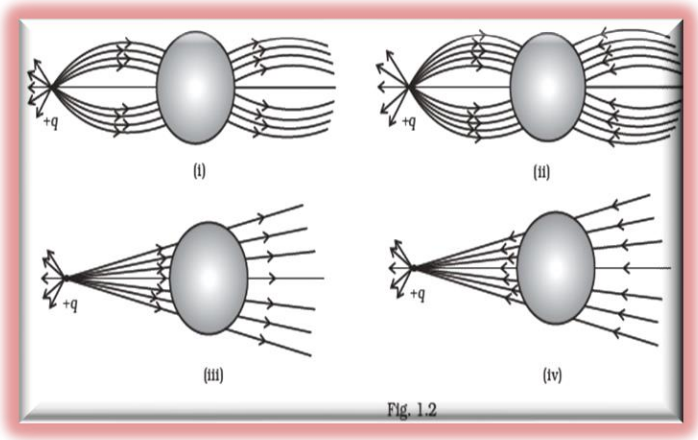

Fig. 1.2

4. The Electric flux through the surface

(a) in Fig.1.3 (iv) is the largest.

(b) in Fig. 1.3 (iii) is the least.

(c) in Fig. 1.3 (ii) is same as Fig. 1.3 (iii) but is smaller than Fig. 1.3 (iv)

(d) is the same for all the figures.

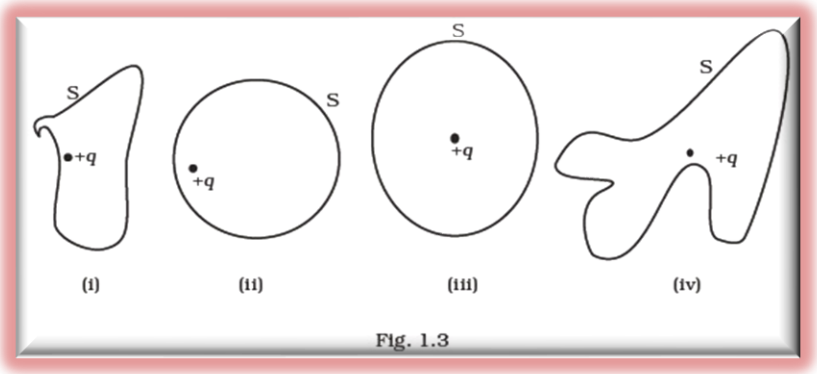

Fig. 1.3

5.Five charges q_1, q_2, q_3, q_4, and q_5 are fixed at their positions as shown in Fig. 1.4. S is a Gaussian surface. The Gauss's law is given by

$$\oint_S \mathbf{E}.d\mathbf{s} = \frac{q}{\varepsilon_0}$$

Which of the following statements is correct?

(a) E on the LHS of the above equation will have a contribution from q_1, q_5 and q_3 while q on the RHS will have a contribution from q_2 and q_4 only.

(b) E on the LHS of the above equation will have a contribution from all charges while q on the RHS will have a contribution from q_2 and q_4 only.

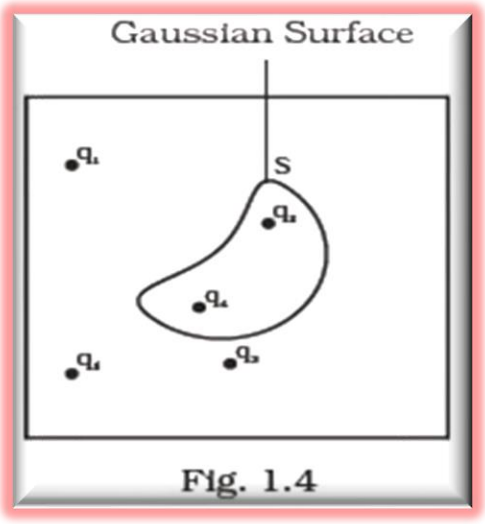

Fig. 1.4

(c) E on the LHS of the above equation will have a contribution from all charges while q on the RHS will have a contribution from q_1, q_3 and q_5 only.
(d) Both E on the LHS and q on the RHS will have contributions from q_2 and q_4 only.

6. Figure 1.5 shows electric field lines in which an electric dipole p is placed as shown. Which of the following statements is correct?

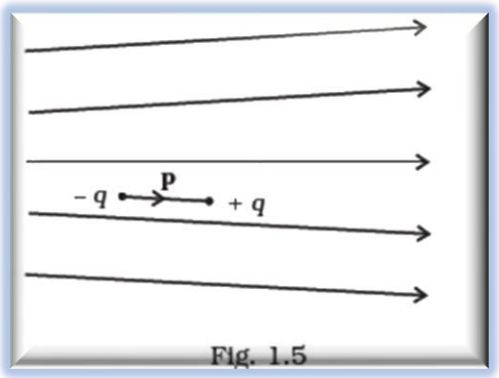

Fig. 1.5

(a) The dipole will not experience any force.

(b) The dipole will experience a force towards right.

(c) The dipole will experience a force towards left.

(d) The dipole will experience a force upwards.

7. A point charge +q, is placed at a distance d from an isolated conducting plane. The field at a point P on the other side of the plane is

(a) directed perpendicular to the plane and away from the plane.

(b) directed perpendicular to the plane but towards the plane.

(c) directed radially away from the point charge.

(d) directed radially towards the point charge.

8.A hemisphere is uniformly charged positively. The electric field at a point on a diameter away from the center is directed

(a) perpendicular to the diameter

(b) parallel to the diameter

(c) at an angle tilted towards the diameter

(d) at an angle tilted away from the diameter.

Multiple Choice Questions (MCQ II)

1. If $\oint_S \mathbf{E}.d\mathbf{S} = 0$ over a surface, then

(a)the electric field inside the surface and on it is zero.

(b) the electric field inside the surface is necessarily uniform.

(c) the number of flux lines entering the surface must be equal to the number of flux lines leaving it.

(d) all charges must necessarily be outside the surface.

2.The Electric field at a point is

(a) always continuous.

(b) continuous if there is no charge at that point.

(c) discontinuous only if there is a negative charge at that point.

(d) discontinuous if there is a charge at that point.

3.If there were only one type of charge in the universe, then

(a) $\oint_S \mathbf{E}.d\mathbf{S} \neq 0$ on any surface.

(b) $\oint_S \mathbf{E}.d\mathbf{S} = 0$ if the charge is outside the surface.

(c) $\oint_S \mathbf{E}.d\mathbf{S}$ could not be defined.

(d) $\oint_S \mathbf{E}.d\mathbf{S} = \frac{q}{\varepsilon_0}$ if charges of magnitude q were inside the surface.

4. Consider a region inside which there are various types of charges but the total charge is zero. At points outside the region

(a) the electric field is necessarily zero.

(b) the electric field is due to the dipole moment of the charge distribution only.

(c) the dominant electric field is $\propto 1 / r^3$, for large r, where r is the distance from origin in this region.

(d) the work done to move a charged particle along a closed path, away from the region, will be zero.

5.Refer to the arrangement of charges in Fig. 1.6 and a Gaussian surface of radius R with Q at the center. Then

(a) total flux through the surface of the sphere is $-Q/\varepsilon_o$

(b) field on the surface of the sphere is $-Q / 4\pi\varepsilon_o R^2$.

(c) flux through the surface of sphere due to 5Q is zero.

(d) field on the surface of sphere due to –2Q is same everywhere.

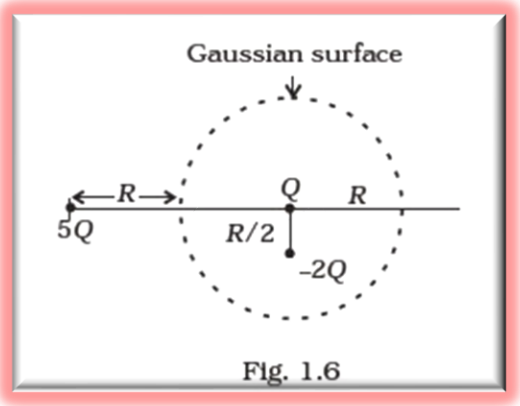

Fig. 1.6

6.A positive charge Q is uniformly distributed along a circular ring of radius R. A small test charge q is placed at the center of the ring (Fig. 1.7). Then

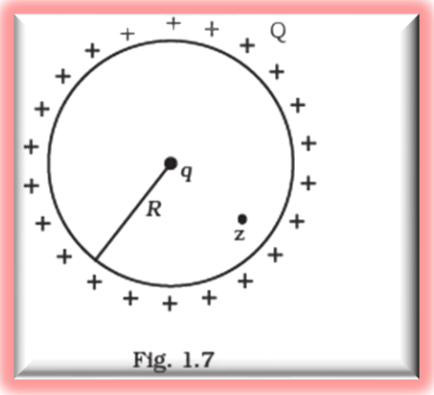

Fig. 1.7

(a) If $q > 0$ and is displaced away from the center in the plane of the ring, it will be pushed back towards the center.

(b) If $q < 0$ and is displaced away from the center in the plane of the ring, it will never return to the center and will continue moving till it hits the ring.

(c) If $q < 0$, it will perform SHM for small displacement along the axis.

(d) q at the center of the ring is in an unstable equilibrium within the plane of the ring for $q > 0$.

Very Short Answer Type Questions

1. An arbitrary surface encloses a dipole. What is the electric flux through this surface?
2. A metallic spherical shell has an inner radius R_1 and outer radius R_2. A charge Q is placed at the center of the spherical cavity. What will be surface charge density on (i) the inner surface, and (ii) the outer surface?
3. The dimensions of an atom are of the order of an Angstrom. Thus, there must be large electric fields between the protons and electrons. Why, then is the electrostatic field inside a conductor zero?
4. If the total charge enclosed by a surface is zero, does it imply that the electric field everywhere on the surface is zero? Conversely, if the electric field everywhere on a surface is zero, does it imply that net charge inside is zero.
5. Sketch the electric field lines for a uniformly charged hollow cylinder shown in Fig 1.8.

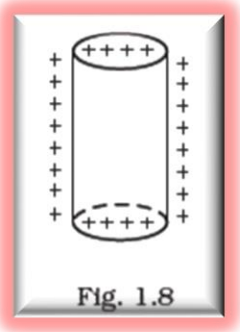

Fig. 1.8

6. What will be the total flux through the faces of the cube (Fig. 1.9) with side of length 'a' if a charge q is placed at

   (a) A: a corner of the cube.

   (b) B: mid-point of an edge of the cube.

   (c) C: center of a face of the cube.

   (d) D: mid-point of B and C.

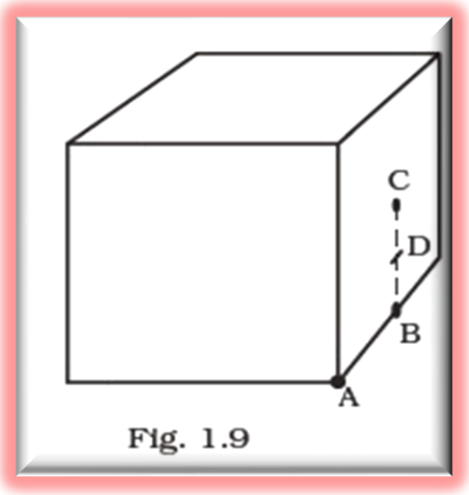

Fig. 1.9

Short Answer Type Questions

1. A paisa coin is made up of Al-Mg alloy and weighs 0.75g. It has a square shape and its diagonal measures 17 mm. It is electrically neutral and contains equal amounts of positive and negative charges.
   Treating the paisa coins made up of only Al, find the magnitude of equal number of positive and negative charges. What conclusion do you draw from this magnitude?
2. Consider a coin of Example 1. It is electrically neutral and contains equal amounts of positive and negative charge of magnitude 34.8 kC. Suppose that these equal charges were concentrated in two point charges separated by
   (i)1 cm (~ 1 / 2 diagonal of the one paisa coin),
   (ii) 100 m (~ length of a long building), and
   (iii) 10^6 m (radius of the earth).
   Find the force on each such point charge in each of the three cases.
   What do you conclude from these results?
3. Fig. 1.10 represents a crystal unit of cesium chloride, CsCl. The cesium atoms, represented by open circles are situated at the corners of a cube of side 0.40nm, whereas a Cl atom is situated at the center of the cube. The Cs atoms are deficient in one electron while the Cl atom carries an excess electron.
   (i) What is the net electric field on the Cl atom due to eight Cs atoms?

   (ii) Suppose that the Cs atom at the corner A is missing. What is the net force now on the Cl atom due to seven remaining Cs atoms?

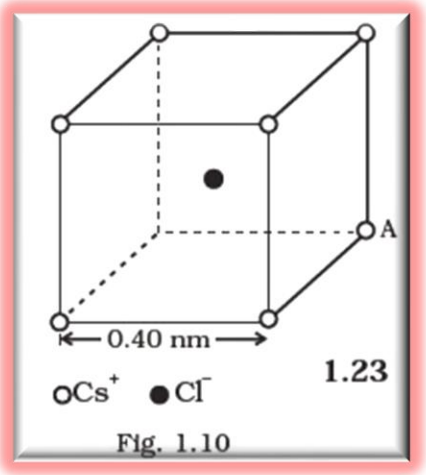

Fig. 1.10

4. Two charges q and –3q are placed fixed on x-axis separated by distance ‘d’. Where should a third charge 2q be placed such that it will not experience any force?

5. Fig. 1.11 shows the electric field lines around three-point charges A, B and C.
(a) Which charges are positive?

(b) Which charge has the largest magnitude? Why?

(c) In which region or regions of the picture could the electric field be zero? Justify your answer.
(i) near A, (ii) near B, (iii) near C, (iv) nowhere.

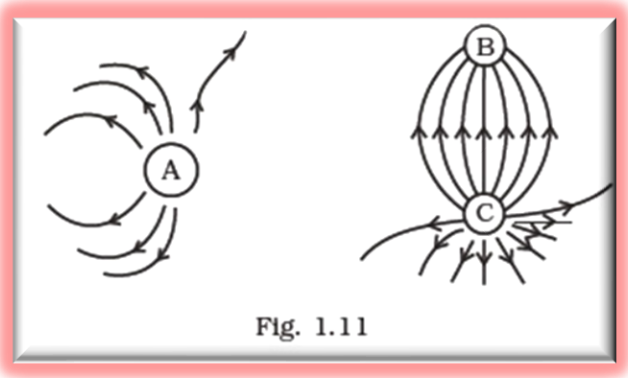

Fig. 1.11

6. Five charges, q each are placed at the corners of a regular pentagon of side ‘a’ (Fig. 1.12).

(a) (i) What will be the electric field at O, the center of the pentagon?

(ii) What will be the electric field at O if the charge from one of the corners (say A) is removed?

(iii) What will be the electric field at O if the charge q at A is replaced by –q?

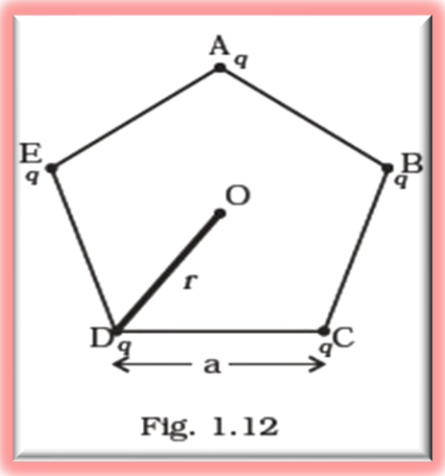

Fig. 1.12

Answers to Multiple Choice Questions

(MCQ I) **(MCQ II)**

Answer	Q.No.
1. (a)	1(c), (d)
2.(a)	2(b), (d)
3.(d)	3(b), (d)

4.(b)	4(c), (d)
5.(c)	5(a), (c).
6.(a)	6(a), (b), (c) and (d).
7.(a)
